PROJECT ROADMAP

1 Prepare
Synthetic Data

Fine-tune GPT 2

3 Host Park Pal

Synthetic Data

Synthetic queries were developed to represent questions that users may ask in association with five NPS API endpoint. The team used an 80/20 split to create test & validation data. Separate queries were developed for evaluating the models to prevent data leakage.

82k
Queries

Model Evaluation

Evaluation methodology

Recreational Visits 2023

API Parameter Prediction Accuracy

■ GPT ■ TF-IDF ■ SpaCy

Fine-Tuned GPT

The NPS API documentation and URL structure did not lend itself to easy interpretation by typical chatbot models. The team explored fine-tuning GPT models to create the parameters for NPS API calls based on a user query.

“

OPENAI

Fine-tuning improves on few-shot learning by training on many more examples than can fit in the prompt, letting you achieve better results on a wide number of tasks.
